

Pitch Day Presentation Guide

Your goal: **explain the problem, show what you built, and prove it works.** You do not need to show every line of code.

Time: About 10–15 minutes + questions

Slides: 8–10 slides + one live demo

Practice: Rehearse as a full team at least twice

Before You Start

1. **Agree on your story** — answer these in one sentence each:
 - What problem does your app solve?
 - How does your app solve it?
 - Why does it matter?
 2. **Split speaking roles** — everyone should speak once (intro, backend, web demo, mobile demo, closing).
 3. **Prepare a demo account** with sample data ready before pitch day.
-

Slide Structure

Slide 1 — Title

- Project name and short tagline
 - Team name and member names
 - Date
-

Slide 2 — The Problem

- Who has this problem?
- What goes wrong without your app?

- One short real-life example

Tip: Do not start with technology. Start with the user.

Slide 3 — Our Solution

- 3–5 main features (bullets)
 - Who uses the app
 - Mention: web + mobile + one shared backend
 - Add one screenshot if you have it
-

Slide 4 — How It Works (Architecture)

Show a simple diagram:

```
Web App (React) → Backend API (Express) → MySQL
Mobile App (React Native) → same API
```

List your stack: **Node.js + Express · MySQL · React · React Native**

Say: "Web and mobile use the same API and database."

Slide 5 — Database

- Main tables (3–5 names)
 - How they connect (e.g. one user → many tasks)
 - Simple diagram or bullet list is enough
-

Slide 6 — Backend API

- Login/register routes
- Main CRUD routes for your app (GET, POST, PUT, DELETE)

- Mention you tested with Postman

Example:

```
POST /auth/login  
  
GET /tasks  
  
POST /tasks  
  
PUT /tasks/:id  
  
DELETE /tasks/:id
```

Slide 7 — Web & Mobile

Use screenshots for both:

- Login screen
- Main screen (list or dashboard)
- Create / edit screen

Say: "Both apps do the same thing and share the same data."

Slide 8 — Live Demo (3–5 minutes)

Follow this order:

1. Log in on web
2. Create something new (task, event, appointment, etc.)
3. Edit or change status
4. Open mobile — show the same data
5. Delete or cancel — confirm it updates

Demo tips:

- Use a saved demo login (do not type passwords on stage)
- Record a backup video in case Wi-Fi fails

- If something breaks, explain what should happen and move on
-

Slide 9 — Challenges & What We Learned

- 2–3 problems you faced and how you fixed them
 - 2–3 things you learned (database design, Git, API testing, teamwork)
-

Slide 10 — Thank You

- "Thank you"
 - Optional: 2–3 future features
 - "Questions?"
-

Show These Requirements in Your Slides & Demo

- ☐ User registration and login
 - ☐ CRUD (Create, Read, Update, Delete)
 - ☐ Good-looking web UI
 - ☐ Mobile app using the same backend
 - ☐ Clear project structure
-

Simple Design Rules

- One idea per slide
- Max 5 bullets per slide
- Use screenshots instead of long text
- Big font (24pt+), good contrast
- Same colors and style on every slide

Tools: Google Slides, Canva, draw.io

On Pitch Day

Do:

- Speak clearly and look at the audience
- Introduce each speaker before they talk
- Stay within the time limit

Avoid:

- Reading every bullet word-for-word
 - Apologizing too much for unfinished parts
 - Debugging live for several minutes
-

Night-Before Checklist

- ☐ Slides proofread (names, spelling, dates)
 - ☐ Demo account works on web and mobile
 - ☐ Backend starts without errors
 - ☐ Backup screen recording ready
 - ☐ Full team rehearsal done
-

Good luck. A clear story and a working demo matter more than fancy slides.
