

Software Development - Students Team Projects

Build a full-stack application with: Backend (Node.js + Express) + MySQL Database + Web App (React) + Mobile App (React Native)

Deadline: Sunday, 26 July 2026

Teams		A	B	C	D
Students	Team Leader	Aya Adel Mohammed	Nipel Shaaban Salih	Shakir Bashir Hussein	Peshin Issa Taher
	Team Members	Hevi Hussein Ali	Dleen Maher Tahseen	Ahmed Nawaf Abdi	Avan Mohammed Ali
		Mateen Jameel Namer	Dersim Ahmed Sulaiman	Hadiya Haji Hassan	Noor Hassan Sofi
		Aya Isam Omer	Payveen Nizar Mohammad	Sharifan Khairi	Ajin Ismat Mohammed
		Sidra jalal Mohammad	Reem Mahmoud Yosef	Gilan Khoro	Sorgul Fareed Mohamad
			Lava Hsso	Samyan Lezgeen Younis	Helin Sef Aldein Almohammad
				Miqdad Mohammed Alsaeed	Dunia Jawad

Project Idea	Event Management App	Task Management App	Student management System	Clinic Appointment System
Description	Manage events, and allow users to register for events.	A simple app where users can create tasks, set deadlines, and mark them as complete.	A system to manage students, departments, and courses. Useful for small schools or training centers.	A system for patients to book appointments and clinics to manage schedules.
Requirements	- Create, update, delete events - Event registration by users - View upcoming events - Event details and participants - Web and mobile interfaces	- User registration & login - Create, update, delete tasks - Mark tasks as completed - View tasks by status (Pending /Done) - Web and mobile interfaces	- Add, update, delete students - Manage departments and courses - Assign students to courses - Search and filter students - Web and mobile interfaces	- User (patient) registration & login - Book, update, cancel appointments - Doctors and schedules management - View appointments - Web and mobile interfaces

All projects should include:

- User registration & login
- CRUD operations (Create, Read, Update, Delete)
- Attractive UI
- Web + Mobile connection to the same backend
- Good project structure

Tips for success:

- Plan your database first
- Build the backend API step by step
- Test your APIs
- Build the web app
- Build the mobile app
- Prepare a final presentation

Tools

- GitHub or GitLab
- Slack or Discord
- Figma or Adobe XD
- Postman or REST Client
- Jira (for task management)
- Google Meet (for online meetings)
